<sup>a</sup> Type numbers with prefix C are developmental types. Each of these C numbers identifies a particular laboratory tube design but the number and the identifying data are subject to change. No obligations are assumed as to future manufacture unless otherwise arranged.

<sup>b</sup> Measured in amperes/watt.

<sup>c</sup> 0080 = Corning Lime Glass  
7056 = Corning Borosilicate Glass, or equivalent materials.

<sup>d</sup> Averaged over any interval of 30 seconds maximum.

<sup>e</sup> Operation at room temperature or below is recommended.

<sup>f</sup> At wavelength of maximum response. Radiant sensitivity values at other wavelengths are shown in Fig. 3.

<sup>g</sup> Light source is a tungsten-filament lamp operated at a color temperature of 2870°K.

<sup>h</sup> The approximate spectral response range, at the 10 percent points, is from 3000 angstroms to 7500 angstroms.

<sup>i</sup> Supply voltage (E) is across a voltage divider providing 1/6 of E between cathode and dynode No.1; 1/12 of E for each succeeding dynode stage; and 1/12 of E between dynode No.10 and anode.

<sup>k</sup> This tube type has been assigned the commercial designation 8644. A variant of this type having a "potted" voltage-divider network and an integral magnetic shield, the RCA Dev. Type C70042CP1, has been assigned the commercial designation 8645.

<sup>m</sup> With supply voltage adjusted to give a luminous sensitivity of 30 amperes/lumen.

<sup>s</sup> With supply voltage adjusted to give a luminous sensitivity of 300 amperes/lumen.

<sup>n</sup> A "ruggedized" type.

<sup>t</sup> With supply voltage adjusted to give a luminous sensitivity of 12 amperes/lumen.

<sup>p</sup> With supply voltage adjusted to give a luminous sensitivity of 4 amperes/lumen.

<sup>v</sup> With the following cathode-to-anode voltage distribution; 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1.25, 1.5, 1.75, and 2.

<sup>q</sup> Tube may have Mg-O secondary-emitting surface.

<sup>w</sup> With supply voltage adjusted to give a luminous sensitivity of 1000 amperes/lumen.

<sup>r</sup> With the following cathode-to-anode voltage distribution; 2, 1.4, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, and 1.

<sup>x</sup> With supply voltage adjusted to give a luminous sensitivity of 20 amperes/lumen.

SQ2540 <sup>a</sup>	(b)	-100 to +125 <sup>o</sup>	0.586	3.783	29	7.13	0.58

<sup>a</sup> Types SQ2539 and SQ2540 are available without attached flexible leads. They are identified by the designations SQ2539V1 and SQ2540V1, respectively.

<sup>b</sup> Maximum response occurs at about 8600  $\pm$  750 angstroms. The approximate spectral response range, at the 10 per-cent points, covers the range from 3750 to 10,800 angstroms.

<sup>c</sup> Light source is a tungsten-filament lamp operated at a color temperature of 2870°K. The sensitive surface of the cell is fully illuminated. The illumination on the cell is 100 foot-candles.

<sup>d</sup> Short-circuit current.
