

## ELECTRONIC VALVE SPECIFICATIONS

SPECIFICATION AD/CV5008 ISSUE NO. 3 DATED 1.11.63

### AMENDMENT NO.1

- (i) Page A. Amend 'No. of pages' to read '2 + 6'.
- (ii) Reverse side of Page 'A' insert 'Page B' and below this insert

"The test requirements given in Specification  
MIL-E-1/510D for JAN 6080WA shall apply."

T.V.C. for S.V.T.L.

March, 1964

(222058)

SERVICES VALVE TEST LABORATORY**CV 5008**

SPECIFICATION	AD/CV.5008 incorporating MIL-E-1/510D		<u>SECURITY</u>
ISSUE NO. 3	DATED 1.11.63.	To be read in conjunction with K.1006.	
		<u>SPECN.</u>	<u>VALVE</u>
		Unclassified	Unclassified

<u>TYPE OF VALVE</u>	Reliable Double Triode			<u>MARKING</u>
<u>CATHODE</u>	Indirectly heated			See K.1001/4
<u>ENVELOPE</u>	Glass			Additional marking 6080WA
<u>PROTOTYPE</u>	6080WA			<u>BASE</u>
			Large wafer octal with metal sleeve	
<u>RATINGS</u>			<u>CONNECTIONS</u>	
Absolute, unless otherwise stated			<u>Pin</u>	<u>Electrode</u>
Heater voltage, nominal	(v)	6.3		1 Grid 2
Heater current, nominal	(A)	2.5		2 Anode 2
Max. heater-cathode voltage	(v)	300		3 Cathode 2
Max. D.C. anode voltage	(v)	250		4 Grid 1
Max. peak forward anode voltage	(v)	3000		5 Anode 1
Max. anode dissipation	(W)	13	A	6 Cathode 1
Max. D.C. grid voltage	(v)	0		7 Heater
Max. grid resistance	(Megohms)	1.0	A,B	8 Heater
Max. grid current	(mA)	5.0	A	
Max. bulb temperature	(°C)	230		<u>DIMENSIONS</u>
Max. altitude	(ft)	60,000		See drawing page 6
			<u>MOUNTING POSITION</u>	
			Any	

NOTES

- A. Each section.
- B. For cathode bias operation; where fixed bias or fixed and auto-bias is used max. allowable grid resistance = 0.1 Megohms.
- C. Notice to Designers
  - (a) The slope of one half of the valve is affected to some extent by the dissipation of the other half due to heat radiation.
  - (b) This valve may show at full dissipation considerable reverse anode current due to anode emission.

NOTES:

1. Maximum grid-circuit resistance:

- a. 1.0 megohm for cathode-bias operation.
- b. 0.1 megohm for fixed-bias operation.
- c. 0.1 megohm for combined fixed- and cathode-bias operation.

2. Variable sampling procedures. See 4.1.1.2.7.

# CV 5008

MIL-E-1/510D

NOTES:

3. For purposes of acceptance inspection, use applicable reliable paragraphs.
4. In addition to the paragraphs specified hereon, the following tests and requirements listed in 3.6 shall apply: 3.3, 3.3.1, 3.4.1, 3.4.2, 3.7, 3.7.7, 3.8, 4.1, 4.3, 4.4, 4.5, 4.6, 4.7, 4.9.2, 4.9.3, 4.9.4, 4.9.5, 4.9.5.1, 4.9.8, 4.9.20.1, 4.9.20.2, and 4.9.21.
5. All tests listed hereon shall be performed during qualification inspection; however, these tests are normally performed during qualification inspection only.
6. Tie k1 to k2; g1 to g2; and p1 to p2.
7. The AQL for the combined defectives for attributes in acceptance inspection, part 1 (production), excluding inoperatives and mechanical, shall be 1 percent.
8. Test each unit separately.
9. Both units shall be operating.
10. With both units operating,  $I_c$  is the sum of  $I_{lc}$  and  $I_{lc}$ .
11. This test shall be performed on the initial lot and thereafter on a lot approximately every 30 days. When one lot has passed the 30-day rule shall apply. In the event of lot failure, the lot shall be rejected and the succeeding lots shall be subjected to this test until a lot passes. Standard MIL-STD-105, sample size code letter F, shall apply.
12. Destructive tests. Tubes subjected to the following destructive tests are not to be delivered on contract or order:

4. 9. 20. 5	Shock test.
4. 9. 20. 6	Fatigue test.
4. 11. 5	Intermittent life-test operation.
4. 11. 7	Heater-cycling life test.
13. A grid resistor of 0.1 megohm shall be added; however, this resistor shall not be used when a thyratron-type short indicator is employed.
14. The no-load to steady-state full-load regulation of the heater-voltage supply shall be not more than 3.0 percent. This test shall be made on a lot-by-lot basis.
15. Stability life test. See 20.2.5.1 of appendix C.
16. Survival-rate life test. See 20.2.5.2 to 20.2.5.2.4, inclusive, of appendix C.
17. Equivalent conditions for survival-rate life test. See 20.2.5.2.5 of appendix C.
18. Intermittent life test. See 20.2.5.3 of appendix C.
19. Envelope temperature is defined as the highest temperature indicated when using a thermocouple of No. 40 B&S or smaller diameter elements placed in contact with the envelope. Envelope temperature requirement will be satisfied if a tube, having bogey 1b (±5 percent) under normal test conditions, is determined to operate at or above the minimum specified temperature at any position on the life-test rack.
20. Order for evaluation of life-test defects. See 4.11.3.1.2.
21. An inoperative, as referenced in life test, is defined as a tube having one or more of the following defects: discontinuity, permanent shorts, or air leaks. (See 4.7.5.)
22. Tubes shall be packaged and packed, as specified in the contract or order, in accordance with Specification MIL-E-75. Package group MIL-E-75/L, package size F, and rough handling test (d) shall apply.
23. Referenced documents shall be of the issue in effect on the date of invitation for bids.
