MONITOR TUBE

The M24-100W is a 24 cm-diagonal rectangular television tube with metal-backed screen primarily intended for use as a monitor or display tube.

QUICK REFERENCE DATA					
Deflection angle	90 0)			
Focusing	electrostatic				
Resolution	900	lines			
Overall length	max. 260	mm			

SCREEN

FOCUSING

Metal-backed phosphor				
Luminescence			white	
Light transmission of face glass			52	%
Useful diagonal		min.	225	mm
Useful width		min.	190	mm
Useful height		min.	140	mm
HEATING				
Indirect by a.c. or d.c.; parallel supply				
Heater voltage	${f v_f}$		6,3	v
Heater current	$\mathbf{I_f}$		300	mA
CAPACITANCES				
Final accelerator to external conductive coating	Cg3, g5(1)/m		420	pF
Cathode to all other elements	$C_{\mathbf{k}}$		5	pF
Control grid to all other elements	$^{\mathrm{C}}_{\mathrm{g}_{1}}$		7	pF

For focusing voltage providing optimum focus at a beam current of 100 μA see under "Typical operating conditions".

MECHANICAL DATA

magnetic

90°

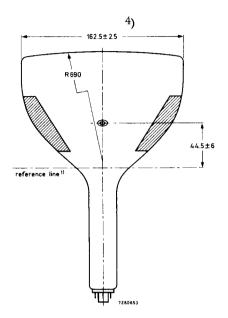

Dimensions in mm

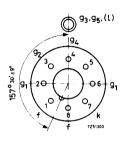

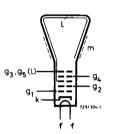

Notes see next page.

MECHANICAL DATA (continued)

Mounting position: any, except vertical with the screen downward and the axis of the tube making an angle of less than 20° with the vertical.

Base	Neo eightar (BSH)
Cavity contact	CT8

Accessories

Socket 2422 501 06001 Final accelerator contact connector type 55563A

PICTURE CENTRING MAGNET

Field intensity perpendicular to the tube axis adjustable from 0 to 800 A/m (0 to 10 Oe). Adjustment of the centring magnet should not be such that a general reduction in brightness or shading of the raster occurs.

NOTES

- 1) The reference line is determined by the plane of the upper edge of the of the flange of reference line gauge when the gauge is resting on the cone.
- 2) The maximum dimension is determined by the reference line gauge.
- 3) Deflection coil AT1071/03 is recommended. If another coil is considered, it is advisable to contact the local tube supplier.
- ⁴) The bulge at the spliceline seal may increase the indicated maximum values for envelope width, diagonal and height by not more than 6,4 mm, but at any point around the seal the bulge will not protrude more than 3,2 mm beyond the envelope surface.

TYPICAL OPERATING CONDITIONS

Final accelerator voltage	Vg3, g5(1)		1 6	kV
Focusing electrode voltage	v_{g_4}	0	to	400	V
First accelerator voltage	v_{g_2}			600	V
Grid no.1 voltage for extinction of focused raster	v_{g_1}	-32	to	-85	v

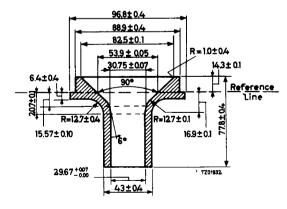

RESOLUTION

Resolution at screen centre measured with the shrinking raster method (non-interlaced raster), under typical operating conditions, at a beam current of $50~\mu\text{A}~(200\text{cd/m}^2=200~\text{nit})$ The resolution can be improved by the use of beam centring magnet catalogue number 3322 142 11401, supplied on request.

LIMITING VALUES (Absolute max. rating system)

Final accelerator vo	ltage	Vg3,g5(1)	max. min.	18 10	kV kV
Focusing electrode v	roltage	${}^{\mathrm{V}_{\mathbf{g}_{4}}}_{\mathrm{-V}_{\mathbf{g}_{4}}}$	max.	1 0,5	kV kV
First accelerator vo	ltage	v_{g_2}	max. min.	800 300	V V
-	egative ositive ositive peak	${\begin{smallmatrix} -\mathrm{V}_{g_1} \\ \mathrm{V}_{g_1} \\ \mathrm{V}_{g_{1p}} \end{smallmatrix}}$	max. max. max.	150 0 2	V V V
Cathode to heater vo	ltage, positive positive peak negative negative peak	V _{kf} V _{kfp} -V _{kf} -V _{kfp}	max. max. max. max.	250 300 135 180	V V 1) V

REFERENCE LINE GAUGE

 $^{^{}m l}$) During a warm-up period not exceeding 15 s the heater may be 410 V negative with respect to the cathode,
