

# TYPE 3ADP- CATHODE-RAY-TUBES

The Du Mont Type 3ADP- is a 3 inch, flat face, single beam, electrostatic deflection and focus Cathode-ray Tube of compact design. Post-acceleration coupled with restricted deflection area provides high light output, very high deflection sensitivity, and small spot size. The electron gun is so designed as to require no appreciable focus electrode current. The deflector and anode leads are brought out directly through the bulb wall in order to provide maximum insulation while minimizing lead inductance and capacitance. The 3ADP- is one of the line of Du Mont Tight-tolerance Cathode-ray Tubes.

## NOTES

1. This tube is designed for optimum performance when operating at an Eb3/Eb2 ratio of 2.0. Operation at other ratios of Eb3/Eb2 may result in changes in deflection uniformity and pattern distortion.
2. Visual extinction of undeflected focused spot.
3. As per MIL-E-1 specifications using useful scan as reference.
4. All portions of a raster pattern, adjusted so its widest points just touch the sides of a 2.295 x 1.530 inch rectangle, will fall within the area bounded by the 2.295 x 1.530 inch rectangle and an inscribed 2.205 x 1.470 inch rectangle.
5. For an Ib3 of 25 μADC measured in accordance with MIL-E-1 specifications.
6. Using a raster size of 2¼ x 1½ inches and an Ib3 of 25 μADC.
7. Using a #594 Photronic cell with Viscor filter (for eye correction).
8. Using a #594 Photronic cell without Viscor filter (without eye correction).
9. Centered with respect to the tube face and with the tube shielded. Connect free deflecting electrodes to accelerator.
10. It is recommended that the deflecting-electrode circuit resistance be approximately equal.
