

## CO.40 B CARCINOTRON

The CO.40B is a millimetric backward wave oscillator, focused by an integral permanent magnet, water cooled and delivering an output power over a frequency range of 68 to 71 GHz.

It can be amplitude modulated through its anode. Frequency modulation can be obtained by line voltage (1) variation, the frequency being independent of the load up to a VSWR of 3 : 1.

The high power obtained at such a high frequency makes it particularly suitable for physical measurements as plasma analysis, parametric resonance, study of the fine structure of the matter. It can be used also for transmission measurements, scaling, etc . . .

In short, the main features of the CO. 40B are :

- Minimum output power : 1 W from 68 to 69 GHz.  
5 W from 69 to 70 GHz  
10 W from 70 to 71 GHz  
15 W in one point at least between 70 and 72 GHz.
- Frequency and amplitude modulation.

### GENERAL CHARACTERISTICS

#### Electrical

	min.	max.	
Frequency . . . . .	68	71	GHz
Heater voltage (d.c.) . . . . .	– 8	– 6	V
Heater current (d.c.) . . . . .	1.8	2.4	A
Wehnelt (2) voltage . . . . .	– 250	0	V
Wehnelt current . . . . .	0	2	mA
Anode (3) voltage for 60 mA line current . . . . .	1100	1800	V
Anode voltage for 40 mA line current . . . . .	800	1500	V
Anode current . . . . .	0	5	mA
Line voltage (at lower frequencies) . . . . .	3000	–	V
Line voltage (at higher frequencies) . . . . .	–	6000	V
Line current . . . . .	–	60	mA
Modulation sensitivity . . . . .	1.2	3	MHz/V
Pushing . . . . .	10	25	MHz/mA

(2) *Wehnelt or Focusing electrode.*

(3) *Anode or Accelerator.*

## MECHANICAL

Operating position . . . . .	horizontal	RF output flange . . . . .	UG 385/U
Focusing . . . . .	permanent magnet	Input connector . . . . .	HT plug (see drawing)
RF output waveguide . . . . .	RG 98/U	Weight . . . . .	16 kg

## COOLING

Inlet water temperature . . max.	60 °C	Corresponding pressure drop . . .	0.3 to 0.5 bar
Inlet pressure . . . . . max.	1.5 bar	Ambient temperature . . . max.	60 °C
Flow-rate . . . . .	1 to 1.5 l/mn	Water interlock . . . . .	supplied with the tube

## ABSOLUTE RATINGS (1)

Heater voltage . . . . .	V <sub>nom</sub> ± 3 %	Anode voltage . . . . . max.	3 000 V
Surge current . . . . . max.	2.5 A	Anode current . . . . . max.	10 mA
Warm-up time . . . . . min.	4 mn	Line voltage . . . . . max.	7 000 V
Wehnelt voltage . . . . . max.	0 V	Line current . . . . . max.	80 mA
Wehnelt current . . . . . max.	5 mA	Load VSWR . . . . . max.	5 : 1

## TYPICAL OPERATION (1)

Heater voltage . . . . .	- 7.6 V	Frequency . . . . .	70.55 GHz
Heater current . . . . .	2.15 A	Line voltage . . . . .	4 895 V
Warm-up time . . . . .	4 mn	Line current . . . . .	60 mA
		Anode voltage . . . . .	1 450 V
		Anode current . . . . .	0 mA
		Wehnelt voltage . . . . .	- 10 V
		RF output power . . . . .	see curves

(1) All voltages are referred to the cathode.

The tube can be operated beyond characteristic frequency range. Ask for information.

## OPERATING INSTRUCTIONS

### Supply (see diagram) :

The supply should meet following items :

- the following starting sequence : Heater, Wehnelt, Line, Anode.
- Current limitations : Heater . . . . . 2.5 A  
Wehnelt . . . . . 5 mA  
Anode . . . . . 5 mA  
Line . . . . . 80 mA
- Protection against shorts or flashes which could occur in the tube.
- Warm-up timing.
- External water interlock for cooling circuit.
- Line overvoltage (Line voltage  $\geq$  Anode voltage + 1500 V) security device.

### Application of voltages :

- Start the liquid flow through the cooling circuit.
- Apply voltages in the following order : heater (allow four minutes minimum cathode warm-up time), Wehnelt, line, anode.

### Protective measures :

- A minimum distance of 25 cm should be kept between the tube and any magnetic material.
- Do not try to obtain modulation through the Wehnelt voltage.
- Operating parameters are given with each tube particular test data sheets.
