M4514B

The Toshiba M4514B is a ceramic sealed fixed frequency continuous wave magnetron, designed to operate on an unsmoothed D.C. anode supply, in the 2420 to 2480MHz frequency range with an average power output of 2.5 kilowatts.

The tube is required liquid cooling and an external magnetic field. The output fitting is designed for coupling to the rectangular waveguide or the heating cavity directly.

The tube is intended for use in microwave heating and cooking application.
