

GEC 7226A RUGGEDIZED VIDICON

TENTATIVE DATA

Type GEC 7226A is a ruggedized non-microphonic Vidicon intended primarily for live pick-up use in transistorized camera equipment where space is restricted and where heat dissipation must be kept at a minimum. The tube is constructed to withstand severe shock, vibration, and random white noise environments in any position without deterioration of the picture due to microphonics or dislocation of tube elements or loose particle damage to photo-conductive surface.

NOTES

1. Base-pin positions fit 0.25 inch thick, 10-hole flat-plate gage with holes located as follows: 9 holes, 0.0550 (± 0.0005) inch diameter equally spaced, 0.2052 (± 0.0005) inch apart on a circle, 0.6000 (± 0.0005) inch diameter, plus a center hole, 0.300 (± 0.001) in. diameter, concentric with 9-hole circle.
2. Signal electrode, bulb outside diameter, and base-pin circle concentricity tolerances are held to enable the tube to fit concentricity gage, Figure 3.
3. The 1/2" maximum length seal area will not exceed the bulb maximum diameter (1.020") but may be less than the bulb minimum diameter (1.010").
4. All dimensions are shown in inches.
