NUMERICAL INDICATOR

Bulletin No. 1049

October 15, 1963

(Notes 5 and 6)

B-4021 Low Voltage NIXIE

The 8502 (B-4021) is a gas filled cold cathode, miniature size numerical indicating tube containing a common anode and ten metallic cathodes. The cathodes are formed in the shape of numerals (0 through 9). The tube is intended for use, as a direct in-line readout device in applications where a low (120 volt DC) ionization voltage is required.

ELECTRICAL DATA	MECHANICAL DATA (Note 2)
	OutlineSee Figure 2
ABSOLUTE RATINGS	Pin Connection See Figure 3
	Mounting Position See Figure 3
Ionization Voltage 120 Vdc max. Supply Voltage 120 Vdc min. Cathode Current 2.0 mA max.	Weight 0.2 oz.
	ENVIRONMENTAL DATA
TEST CONDITIONS (FIGURE 1)	Temperature 65°C to +85°C (Note 1)
Supply Voltage (Ebb) 120 Vdc	Altitude
Series Resistor (Rp) 20 K	Vibration (1) 10-50 cps .08'' excursion
TEST LIMITS (NOTES 1 & 3)	(2) 50-500-50 cps 10 G's acceleration
Cathode Current (Ik)	t = 15 minutes (Note 4)
(minimum) 0.7 mA	Shock(1) 250 G's 1±.5 msec.
(maximum) 1.4 mA	duration 50 G's 11±1
Ionization Voltage (Ebb) 120 Vdc max.	msec, duration

NOTES:

- 1. At temperatures above and below 25°C, changes in cathode current can be expected.
- 2. This tube is available with nominal 1.40 inch pin leads; it is then designated as Type B-4021L.
- Glow on any tube part other than the numeral under test constitutes a failure of this test.
- 4. For this test, tubes are mounted in each of three planes, X-1, X-2, and Y-1, for one-third of the total excitation time. On each plane, the ten cathodes are energized sequentially at the test conditions.
- 5. Shock test may be performed on any shock machine capable of producing a half sine wave shock form of the specified duration and amplitude.
- 6. Each tube is subjected to a total of 20 shocks, 5 shocks in each of positions X-1, X-2, Y-1, and Y-2, in any sequence.
